THE ENCRYPTED CHART · FREE SELF-CHECK

The five-minute website self-check

See for yourself whether your practice website tells advertisers which pages your patients read.

1 Open the log

In Chrome, open an Incognito window and go to your website. Right-click the page, choose Inspect, then click Network.

2 Load a condition page

Open a page about a condition you treat. Wait ten seconds. Ignore the cookie banner.

3 Filter for names

In the Filter box, type these one at a time: **facebook, google, doubleclick, tiktok, clarity, hotjar**

4 Read what was sent

Anything still listed went to that company. Click one and look for your page address.

5 Test the form

Send your booking form with made-up details, then filter again.

6 Get a second opinion

Paste your website address into Blacklight, a free scanner: themarkup.org/blacklight

Found one on a condition page or your booking form? Ask whoever runs your website for three things.

1. Remove the ad trackers
From condition pages, forms and anything behind a login.

2. Make Decline mean no
Nothing is sent unless a visitor accepts.

3. Put booking in your EHR
Booking and intake happen there, not on the website.

Then put it in writing. The tracking policy, vendor letter and risk assessment forms are in the Private Practice Protection Vault. **NPA members: $249 with code NYSNPA100** at store.encryptedchart.com
