THE ENCRYPTED CHART · FREE SELF-CHECK

The five-minute website self-check

Three steps to find out whether your practice website tells advertisers which pages your patients read.

1 Run Blacklight

Go to themarkup.org/blacklight, paste in your website address and press Scan Site. It is free and takes about a minute. A good result says no ad trackers, no third-party cookies, and nothing sent to Facebook, TikTok, X or Google.

2 Talk to whoever runs your website

Send them the result and ask for three things.

Remove the ad trackers
From condition pages, forms and anything behind a login.

Make Decline mean no
Nothing is sent unless a visitor accepts.

Put booking in your EHR
Booking and intake happen there, not on the website.

3 Document it

Write down what you found, what was changed, and the date. Then run Blacklight again and keep the result with your HIPAA risk assessment.

Need the forms? The tracking policy, vendor letter and risk assessment forms are in the Private Practice Protection Vault. **NPA members: $249 with code NYSNPA100** at store.encryptedchart.com
